Description

TrueAlert non-addressable multi-tone multi-candela horn/strobes provide a flexible selection of output tones and strobe intensity for fire alarm audible notification. Tone selection, output level, and strobe intensity is set per appliance, allowing notification needs to be tailored to specific area requirements. (Refer to tone output details on page 4.)

Local Tone Selection. DIP Switch selection determines the local tone choice. A separate DIP Switch position allows selection of a standard or a high output sound level, selectable appropriate to the location. (See page 4 for sound output ratings.)

Canadian two-stage alarm applications. A DIP Switch selection per appliance allows the SmartSync March Time pattern input to be produced as 60 BPM or 20 BPM. The 20 BPM rate is typically required for Canadian two-stage alarm applications as the pre-signal, followed by the Temporal Pattern. Two-stage alarm operation requires a 4010, 4010ES, 4100ES, or 4100U as the control panel.

Flexible mounting. Multi-tone horn/strobes can be semi-flush or surface mounted on a standard single gang, double gang, or 4" square (102 mm) electrical box. Optional accessories are available to increase mounting and application flexibility.

Strobe Application Selection

Proper selection of visible notification is dependent on occupancy, location, local codes, and proper applications of: the *National Fire Alarm Code* (NFPA 72), ANSI A117.1; the appropriate model building code: BOCA, ICBO, or SBCCI; and the application guidelines of the Americans with Disabilities Act (ADA).

Synchronized Strobes

Multiple Strobes. When multiple strobes and their reflections can be seen from one location, synchronized flashes reduce the probability of photo-sensitive reactions as well as the annoyance and possible distraction of random flashing. The multi-candela strobes of these multi-tone horn/strobes are synchronized by the controlling SmartSync operation NAC.

SmartSync Two-Wire Control

SmartSync operation mode allows a two-wire circuit to provide the ability to activate both the multi-tone horn and strobe on the same NAC and then allow the multi-tone horn to be silenced while the strobe remains flashing. The multi-tone horn operates as “on-until-silenced” while the strobe operation is “on-until-reset.”
